

Devops and Agile

What is compare between Devops and Agile?

DevOps:

Definition: DevOps is a set of practices, principles that aim to enhance and make easy collaboration and communication between software development (Dev) and IT operations (Ops).

It focuses on some of things like the software delivery pipeline, improving deployment frequency, and ensuring the reliability of applications in production environments.

Agile:

Definition: Agile is a software development methodology that promotes planning, early delivery, and continuous improvement.

It emphasizes incremental development, that software is delivered in small, functional increments while maintaining flexibility to respond to changing requirements or customer feedback they need it to modify so it is way that try giving best building.

What is the difference between Devops and Agile?

Compare	Devops	Agile
Focus	Software development and IT operations collaboration	Software development approach
Method	continuous integration, continuous delivery.	incremental development
Goal	Faster software delivery	Deliver working software in short cycles with customer feedback
Team	Dev and Ops	self-organizing teams
Feedback	Quick feedback loops in development and ops	feedback from stakeholders ,customer
Scope	Entire software delivery lifecycle	Mainly development phase
